LibraryManager

Automated Library Management Software

Versatile and scalable, DSI's LibraryManager sets the standard for MCP-based robotic library management. LibraryManager easily accommodates your increasing data storage requirements. LibraryManager's flexible design supports the most simple direct attached storage configurations all the way to managing multiple libraries from multiple hosts.

LibraryManager provides an interface from various tape management software programs to automated virtual or physical library systems.

Library Controller

The library controller is a hardware component connected to the MCP-based host system via TCP/IP. It receives commands from the host and translates them to commands for the virtual or physical tape library. Responses from the library are received by the library controller, translated, then returned to the host. The controller appears to the host as an IP address which enable simple configuration changes.

LibraryManager's

FLEXIBLE DESIGN SUPPORTS THE MOST SIMPLE DIRECT ATTACHED STORAGE CONFIGURATIONS ALL THE WAY TO MANAGING MULTIPLE LIBRARIES FROM MULTIPLE HOSTS.

Features

- HLM drive management
- Cleaning tape tracking
- Supports libraries from 10 to 10,000+ cartridges
- Common interface (API) provided for all library types

Requirements

- MCP release 5 or later
- DSI library controller and supporting software
- A qualified virtual or physical tape library
- DSI TapeManager or other tape management software
