TapeManager

Tape Tracking and Management Software

TapeManager from Dynamic Solutions International simplifies your operation by automatically tracking all tape and optical backup media. TapeManager also provides security to all tape and optical technologies on Unisys MCP-based systems.

TapeManager logs tapes real-time and tracks tapes stored both on-site and off-site. In recovering a database, TapeManager supplies tapes requested by DM Utility, removing any guesswork. In conjunction with an automated tape library, TapeManager automates data recovery without operator intervention.

TapeManager protects tapes from accidentally being scratched or over-written. The TM SECURE command limits access to sensitive functions at various level, including user code and DDT.

All TapeManager commands are entered through the console just like other system commands. There is no need to look up a job or mix numbers. Help screens are also available through the console for the most user-friendly experience.

TapeManager also includes a utility program that follows the standard A series (MARC) presentation with menus and forms, aided by on-line help. TapeManager offers on-line help following the standard MCP implementation. A hyper-text-like capability allows user to request help for unknown items while in help mode by SPCFY-ing on the item.

**IN CONJUNCTION WITH AN
AUTOMATED TAPE LIBRARY,
TapeManager
AUTOMATES DATA RECOVERY
WITHOUT OPERATOR
INTERVENTION.**

Features

- Custom reporting provided in hard copy at terminals, to disk or e-mail
- Ad hoc reports available in both word and excel
- Extensive searching capabilities locate tapes automatically
- Customizable label printing interface
- Operator console (ODT) command and response; no AX or SM required

Benefits

- Reliable, unattended media tracking
- Reduced system downtime
- Investment protection

Requirements

- MCP release 5 or later
- MT/ET equivalent terminal or terminal emulator
